

# Resonance

A year without the annual day is considered to be a very monotonous one but this year was hardly laborious due to the introduction and the successful implementation of 'Resonance', an exhibition where every subject came to life and a mind seeking knowledge was quenched of its thirst. Students of classes IV to IX participated in the exhibition. The mind was taken on a tour where there was logic and reason behind every phenomenon and then was immediately transported back in time to relive the past; the mind then enthralled in the paradigm of numbers and calculations experienced the magnificent beauty of literature, where logic takes a step backwards and the instincts of the heart take over, in a variety of languages. The mind was then pulled into the realm of art, followed by the world of geography, where they discovered many interesting and incredible facts of the only planet that has life on it. The students revelled in the overall power of knowledge.

True to its name, this exhibition resonated knowledge from all directions and in every sphere of learning. The weeks of toil from the students' as well as the teachers' side completely paid off. At the end of the day, there were many proud parents and ecstatic students.
